

Formulated for optimal
performance and
maximum uptime

Continuous Inkjet

Videojet® inks and fluids

Videojet iQMark™ inks combine performance with safety and sustainability

Videojet iQMark inks are responsibly designed and manufactured to deliver superior performance that meets your application and sustainability goals.

iQMark inks are ideal for marking and coding applications in:

Meat & poultry

Baked goods
& cereal

Tobacco

Beverages

Salty snacks

Cosmetics

Pharmaceuticals

Our continuous inkjet ink range includes versions that have (or combine) these key properties:

Our products help you meet your production and sustainability objectives

Our CIJ inks are designed for adhesion to a wide variety of recyclable and reusable substrates, including the newer mono material laminate films, recycled plastics, returnable packaging, etc.

Videojet cartridges are designed for recyclability. They also empty to meet regulatory standards, removing hazardous waste considerations, helping you achieve your zero landfill objectives.

Our fluids products are packaged in cardboard cases made with materials harvested from sustainable forests, and this packaging can be easily recycled.

With the Danaher Business System (DBS) as our driving force, we continue to make measurable progress across our three sustainability pillars

People - *Helping People Reach Their Potential*

We strive to attract, develop, engage, and retain the best people to continually make Videojet a better place to work while ensuring a safe working environment for all.

Product Innovation - *Helping Solve Product Identification Challenges*

We place customers at the core of everything we do. We innovate to improve our products' uptime and reliability, enabling our customers to meet production and sustainability goals.

Environment - *Helping Reduce Our Environmental Impact*

We are committed to reducing our emissions, waste, and energy footprint by streamlining our global operations.

Solutions for every application

Videojet has invested significant resources to design leading ink solutions for a vast range of substrates and applications.

Beverage (non-returnable)

Substrates: Plastic bottles, glass bottles, metal cans, and paper cartons

To meet the exacting demands of the beverage industry Videojet has fast-dry, high-contrast, food-safe and condensation-penetrating inks to handle the high-speed lines found in the beverage industry.

Inks: V4201, V4226, V4240, V4250 , V4269 

Beverage (returnable)

Substrates: Glass bottles, plastic carboys, and metal kegs

Videojet condensation-resistant and caustic-removable inks are durable during refrigeration and soluble in common caustic wash solvents used in the recycling/refilling process.

Inks: V4220, V4251, V4283

Food (retort)

Substrates: Metal cans, glass jars, and laminated plastic pouches

Videojet formulates specialized high-contrast thermochromic inks to withstand moisture and the high temperatures present in sterilization processes. These inks are designed to produce a color-changing quality assurance indicator to alert the manufacturer that the sterilization process was completed successfully.

Inks: V4237, V4271, V4275, V4278 

 = iQMark ink offering

Food (flexible packaging)

Substrates: Candy and granola bar plastic wrappers

Flexible packaging can present challenges to an ink's adhesion due to their inherent 'slick' surface properties and use of various plasticizers. The formulation of Videojet flexible films/plastics inks meet strict food packaging regulations and provide optimal adhesion and code durability.

Inks: V4230, V4262, V4264

Baked goods and tobacco

Substrates: Bread bags, cookie and cracker boxes, cigarette and cigar packages, and paper cartons

For customers that need a high-contrast, non-contact code that requires a solvent-based ink, Videojet low-odor inks have been specially formulated with solvents and compatible resins/dyes that are designed to not impose unwanted flavors.

Inks: V4222, V4260, V4262

Automotive and aerospace

Substrates: Plastic, metal, and glass part marking

Videojet inks can help address your unique production needs, including specialty inks that are heat, oil, and solvent resistant.

Inks: V4215, V4221, V4248

HDPE plastic, wire and cable

Substrates: Plastic containers and wire and cable

Videojet provides the right inks for nearly any type of plastic, wire insulation, or cable jacket. Our selection includes fast-dry, UV-visible, abrasion and transfer-resistant inks with excellent adhesion to a wide variety of plastic materials, including HDPE.

Inks: V4202, V4225, V4230, V4264, V4289

Building materials

Substrates: Bags, carpet, lumber, wood products, and plastic containers

Videojet formulates inks to perform in challenging production environments. Our range includes low-odor, fast-dry and colored inks for contrast on light-colored substrates, as well as inks with resistance to acids, bases, mineral spirits, and oils.

Inks: V4214, V4216, V4262, V4289

Electronics

Substrates: Plastic and metal part marking

Fast-drying inks can accommodate a range of production speeds and application requirements for electronic components. And for production processes requiring them, durable, alcohol-resistant or halogen-free inks are available.

Inks: V4236

Pharmaceutical and medical

Substrates: Metal vial caps, glass vial, plastic bottles, and paper cartons

Legibility and contrast are non-negotiable when it comes to coding pharmaceutical and medical device products. Videojet's robust ink portfolio includes autoclave-resistant, visible and UV inks.

Inks: V4257, V4258, V4262

Cosmetics, personal and home care

Substrates: Diapers, adult continence care, and paper packaging

Videojet can help you to code on virtually every package type and substrate with inks that protect and enhance your brand. Our range includes covert coding UV inks for anti-counterfeiting, low-odor inks, and cosmetic-grade inks which act as a wetness indicator on absorbent diapers and incontinence products.

Inks: V4262, V4299

Setting the **gold standard** in ink purity, performance, reliability, and customer service

Quality

Videojet inks give you high ink purity and quality. Behind every batch lies 100s of hours of testing and years of expert chemical engineering – ensuring the consistent gold standard our customers demand.

Design

Our team of world-class chemists design inks for a wide range of coding requirements and are constantly researching new formulations to meet new coding application challenges.

Performance

Videojet inks offer extended uptime, trouble-free operation, and a long shelf life (up to 24 months), as well as consistently clean and clear codes. No mess, no waste, and no mistakes! We make ink replenishment clean and simple through Smart Cartridge design, compatible with the Videojet 1280, 1580, and 1880. Cartridge options help you choose the right size for your production needs: 750ml for low-usage operations or 1L for high usage.

Compatibility

Genuine Videojet inks work in harmony with their environment to give you optimal compatibility with our printers. Our specially-formulated inks are optimized to our printers. In comparison, non-Videojet supplies can block the ink system and cause internal corrosion leading to unscheduled maintenance and downtime.

Compliance

iQMark™ coding

iQMark™ supplies are responsibly designed and manufactured to maximize contrast, adhesion and uptime while meeting safety, environmental and regulatory requirements. The iQMark™ line of inks, make-ups and cleaners can address multiple application requirements from a single formulation including MEK-free, food packaging compliant and low-odor inks.

Customer Service

We want you to buy with confidence anytime you purchase Videojet inks or supplies. That's why the quality of our service is supported by our 'Gold Standard' promise, to help ensure your inks are within the agreed specification. Our experienced customer service team is on hand to answer a wide variety of questions, from regulatory concerns to ink placement on packaging.
